## HOEKOM DIE NGUNI BEESRAS?

Die ideale moederlyn ras vir  
ekonomiese vleisproduksie en  
kruisteling

Hoë vrugbaarheid, kalwings-  
gemak en herkonsepsie onder  
ekstensiewe toestande

Groot genepoel met baie  
seleksiepotensiaal onder  
Nguni's in Suidelike Afrika

Die ras wat die meeste kilogram  
vleis per hektaar teen die laagste  
koste produseer

Hoë interne bloed-ureumvlakke  
dra by tot die Nguni se vermoë  
om lae gehalte weidings om te  
sit in vleis

Vir kalwingsgemak gebruik  
Nguni-bulle op verse van enige  
ras

Gehardheid en weerstand-  
biedenheid teen bosluis  
oordraagbare siektes

Langslewendheid is 'n  
raskenmerk en verseker  
volgehoue produksie

## WHY THE NGUNI BREED OF CATTLE?

The ideal dam line for economically sustainable meat production and cross-breeding

For ease of calving use Nguni bulls for opening heifers of any breed

Exceptional fertility even under extensive conditions

Hardiness and high levels of resistance to ticks and tick-borne diseases

An extensive gene pool offering a wide range of selection potential is available in Southern Africa

Longevity is a breed characteristic that ensures a lower level of replacement and therefore more saleable breeding females

The breed that produces the most kilograms of beef per hectare at the lowest cost

Higher levels of blood urea and rumen ammonia contribute to the Nguni's ability to convert low quality roughage into saleable beef
